

1. Use case Diagram

Functional Diagram of the Wellness App System

Actors & Use Cases: The Roles and Actions Within the System.

Actor 1: User

The primary consumer of the app's wellness features. Individuals seeking support for self-management, community interaction, and resource discovery.

Account Management

- Register
- Login
- Logout
- Edit Profile

Wellness Tools

- Take wellness questionnaire
- View wellness report
- View dashboard

Task & Habit Management

- View, add, remove, and mark tasks as complete/incomplete
- Track progress on habits

Community Interaction

- Join community section
- View posts and comments
- Create posts
- Post comments
- Join events

Resources & Notifications

- View resources
- View notifications

Actor 2: Admin

Manages platform content, users, and overall operations. Responsible for community moderation and managing resources.

Platform Management

- Login
- Logout

User Management

- View all users
- Block a user
- Unblock a user

Content & Resource Management

- Add resources
- Remove resources
- View resources

Community Moderation

- View posts and comments
- View reported comments

Event Management

- Create events
- Edit events
- Remove events
- View events

System Oversight

- View analytics

Actor 3: Mental Health Advisor

Ensures the clinical and therapeutic quality of the platform's content. These are professionals who moderate the questionnaire and all wellness content to ensure it is safe and genuinely helpful for users.

Content Curation

- Provide wellness content, including tasks, tips, exercises, and resources.

Questionnaire Oversight

- Review and update the wellness questionnaire to maintain its relevance and effectiveness.

2. Class Diagram

3. Product Backlog & User Stories

- As an User, I want to create an account and log in safely. - High
- As a User, I want to take a wellness questionnaire to assess my mental state. - High
- As a user, I want to receive a personalized report with tasks based on my score. - High
- As a user, I want to manage a daily task list to build healthy habits. - Medium
- As a user, I want to be able to book appointments with professionals.- Medium
- As an admin, I want to manage resource links so users can find professional help. - Medium
- As a user, I want to join a community forum to share experiences anonymously. – low

Sprint Goal :

To complete the user ‘diagnosis’ loop – User registers > Assess > Report

This is because this project emphasizes the “early awareness” part of the problem and it generates potential solutions in the form of personalized reports.

Selected backlog items for sprint 1:

- Registration & Authentication (Backend/Frontend).
- Interactive Questionnaire UI.
- Scoring & Diagnosis Logic (The "Automate the diagnosis" scope item).
- View Wellness Report.

Detailed User Stories

1. User Authentication

- User Story: As a User, I want to create an account and log in safely so that my personal wellness data remains private.
- Value: Critical (Foundational) | Risk: High (Security/Data Privacy) | Effort: High
- Acceptance Criteria:
 - User can register with email and a strong password.
 - Password data is encrypted in the database.
 - User receives an error message for incorrect credentials.
- Task Breakdown:
 - Task 1: Set up Auth provider/Backend
 - Task 2: Create Login/Signup UI

2. Wellness Questionnaire

- User Story: As a User, I want to take a wellness questionnaire to assess my mental state so I can understand my current needs.
- Value: High | Risk: Medium (Content Accuracy) | Effort: High
- Acceptance Criteria:
 - User can answer multiple-choice questions / Interactive questionnaire
 - Progress bar shows completion status.
 - System validates that all questions are answered before submission.
- Task Breakdown:
 - Task 3: Build Questionnaire Logic & State Management
 - Task 4: Input questionnaire content/schema

3. Personalized report and scoring

- User Story: As a user, I want to receive a personalized report with tasks based on my score so I know how to improve my wellbeing.
- Value: High | Risk: Medium (Algorithm logic) | Effort: Mid
- Acceptance Criteria:
 - o System calculates a score based on questionnaire answers.
 - o User sees a summary page with specific "Next Step" tasks.
 - o Report is downloadable or saved to the profile.
- Task Breakdown:
 - o Task 5: Develop scoring algorithm
 - o Task 6: Design report summary dashboard

4. Daily Habit tracker / Task list

- User Story: As a user, I want to manage a daily task list to build healthy habits so that I can maintain consistency in my wellness journey.
- Value: High (Retention/Engagement) | Risk: Low | Effort: High
- Acceptance Criteria:
 - o User can view a list of recommended tasks from their report.
 - o User can check off tasks as "Complete."
 - o The list resets daily, but progress history is saved.
- Task Breakdown:
 - o Task 1: Design the habit checklist UI.
 - o Task 2: Create the database schema for daily progress tracking.
 - o Task 3: Implement the "Daily Reset" logic.

5. Admin Resource Management

- User Story: As an admin, I want to manage resource links so that users always have access to updated and verified professional help.
- Value: Medium | Risk: Low | Effort: Low
- Acceptance Criteria:
 - Admin can add, edit, or delete external links (e.g., resources).
 - Links are categorized (e.g., "Emergency," "Articles," "Support Groups").
 - Changes reflect instantly on the user-facing "Resources" page.
- Task Breakdown:
 - Task 1: Create Admin Dashboard view for links.
 - Task 2: Implement CRUD (Create, Read, Update, Delete) API endpoints for resources.

6. Anonymous community forum

- User Story: As a user, I want to join a community forum to share experiences anonymously so that I feel supported by others without fear of judgment.
- Value: Medium | Risk: High (Moderation/Safety) | Effort: High
- Acceptance Criteria:
 - User can create a post using a randomly generated "Alias."
 - Other users can comment on or "like" a post.
 - A "Report" button is available on every post for moderation.
- Task Breakdown:
 - Task 1: Build the forum feed and post creation logic.
 - Task 2: Implement the "Alias" generation system.
 - Task 3: Build a moderation queue for Admin review.

7. Professional Appointment booking

- User Story: As a user, I want to be able to book appointments with professionals so that I can get expert clinical support when I need it.
- Value: High | Risk: High (Scheduling sync & Privacy) | Effort: 13 Points
- Acceptance Criteria:
 - o User can filter professionals by specialty or availability.
 - o User can select a time slot and receive a confirmation email.
 - o calendar shows "Booked" vs "Available" states.
- Task Breakdown:
 - o Task 1: Integrate a 3rd-party calendar API (e.g., Google/Calendly) OR create a simple new system for the platform.
 - o Task 2: Build the professional profile directory.
 - o Task 3: Set up automated email notifications.
